

## HPD100 Reverse Power Protection Module

HPD100 is a Reverse Power Protection Module, monitor active power of generator and use to parallel two generators and parallel one generator with Main Bus.

### Function

1. Precisely measure active power of generator.
2. The output is relay free voltage contacts.
3. The point of reverse power is adjustable.
4. The delay of reverse power is adjustable.

### Characteristic

1. **Input Voltage: 380VAC 50/60Hz 3-phase 3-wires**
2. **Input Current: 5A**
3. **The adjustable range of reverse power: 1-20%**
4. The adjustable delay of reverse power: 1-6s
5. Supply Consumed Power: <1.5VA
6. Current Consumed Power: <1VA(each phase)
7. Output Relay Contact Capability: 250VAC 10A
